

ABSTRACT OF THE DISCLOSURE

A printing device contains a printing medium supporting member having a supporting face for supporting a printing medium; a screen plate fitting detachably onto said supporting face in a state where the printing medium is sandwiched between said screen plate and said supporting face of said printing medium supporting member; and an ink emission section for emitting ink onto the printing medium on said supporting face. A printing system has the printing device described above, and ink color determining means for setting the color of the ink used in printing by means of said screen plate to a lighter color than the ink used in printing by means of said ink emission section. A printing method contains the step of screen printing for printing onto a printing medium by means of a screen plate, and the step of ink emitting for emitting ink of a darker color than the ink used in said screen printing step, onto the screen printed region, from an ink emission section.
